[MCE 2.8 UI] Binding day-2 host to cluster defaults host to worker role

Key details

Field Tab | Prioritization | Escalation | Release | Testing | SFDC | Portfolio Solutions

Description

Description of the problem:

Environment:

ACM: 2.12
MCE: 2.7

Managed Cluster version: 4.17.15 (local), 4.17.4 (customer's)
Hub Cluster version: 4.16.30

Issue: Unable to replace master node from ACM UI.

Steps followed:

Cluster is installed as standalone cluster.
Then tried to replace one of the master node.

Do do so,
1. deleted the etcd related resources
2. deleted BMH & machine
3. deleted node from the managed cluster

On hub cluster:

1. deleted agent CR corresponding to unhealthy master node, resulting in unbinding of the node from host Inventory and cluster UI.

2. Then recreated the node on backed and booted with discovery ISO.

3. As mentioned in the documentation, assigned role "{master}" before approving the host.

The output shows the role as expected.

```
time="2025-02-06T17:11:34Z" level=info msg="Setting annotation agent.agent-install
time="2025-02-06T17:15:25Z" level=info msg="Setting annotation agent.agent-install
time="2025-02-06T17:17:54Z" level=info msg="Setting annotation agent.agent-install
```

4. However, when the node is added back to cluster using "Add Hosts", the role gets updated to "Worker"

5. Eventually the node is added as worker to the cluster.

https://docs.redhat.com/en/documentation/red_hat_advanced_cluster_management_for_kuberne
es/2.12/html/clusters/cluster_mce_overview#adding-ctrl-nodes-managed-unhealthy

I have tested and observed the same behaviour in my local lab. Is this a bug ? (product/documentation) or are we missing anything ?

How reproducible:

100%

Steps to reproduce:

1. Refer above steps mentioned in description

2.

3.

Actual results:
Node gets added as worker node.

Expected results:
Node should be added as master node

Blocked Reason

None
